The Binding of the Agent: Floors and themes

All floor themes in the game, what each one looks and sounds like, and what (if anything) changes in gameplay.

How floors work

Cycle. There are 11 floor themes. Floor *n* uses theme *(n − 1) mod 11*, so the list repeats forever: floor 12 is The Backlog again, floor 14 is Forgotten Branches again, and so on. Repeated floors get a roman numeral on the floor card ("The Backlog II").

Depth vs. theme. Difficulty follows the **depth** (floor number), never the theme: enemy unlocks, room budgets, HP scaling and boss pools all go by depth. The theme decides the look, the music, the breakable objects, which enemies are common there, and a few theme-specific extras (marked *Gameplay* below).

Who lives where. On floors 1–7 every enemy has one or more home floors. At home it spawns at full odds; elsewhere it still turns up, but at only a fifth of its usual odds. Each floor's residents are listed under *Gameplay, enemies* below. The floor families (Legacy Codebase, Forgotten Branches, Dependency Hell, Production, Sandbox Borders, The Training Data) live only on their own floor until floor 8.

Floor 8 and deeper: everything at once. From floor 8 the floor identity fades. The odds of every enemy that is rare or absent on a floor are raised toward normal (a quarter of the way on floor 8, about a tenth more per floor, completely from floor 16). The floor families now turn up on every floor, more and more often, and the Octopus Merge can be the floor boss anywhere (at most as likely as a regular boss). The home floors still get their bonus (for example Deprecation Warnings on Sandbox Borders). Some combat rooms on these floors also hold a **side quest**: one of the early bosses (The Monolith, The Stakeholder, The Infinite Loop or the Rogue Agent Swarm) at half the floor boss's HP, in an open arena, without the intro card or the trapdoor. There's one on floors 8 and 9 and one or two from floor 10.

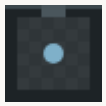

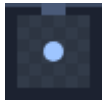

What a theme controls (`B.FLOOR_THEMES` in `src/data/palette.js`, names in `B.TEXT.FLOORS` in `src/data/text.js`):

- **Colours:** floor checkerboard, walls, doors, an accent colour (floor card, HUD floor name, minimap frame), a soft light in the room centre and the vignette tint.
- **Floor pattern** and **decor** (background details baked into the room), optionally **wall decor** and an animated **ambient** layer.
- **Breakable objects:** which kinds appear, in how many combat rooms, and how many per room.
- **Music:** root note, scale, tempo and lead instrument of the procedural chiptune loop.
- **Tile sprites (optional):** a theme can swap the look of rocks, blocks or spikes (`tiles`); Sandbox Borders uses this for sandstone boulders and border fences.
- *Gameplay (optional):* map shape (`gen`), cacti (`cacti`), themed enemies and bosses (`themes` / `themeOnly`), extra quips and epitaphs.

Things that look **the same on every floor**: pits and spikes, doors and the special rooms (treasure, shop, boss, secret); rocks and blocks too, except on Sandbox Borders.

Overview

	#	Floor	Pattern	Decor	Breakables	Music	Extras
	1	**The Backlog** `backlog`	Wooden planks	Sticky notes and paper scraps	Crates	D dorian, 104 bpm, square	—

	#	Floor	Pattern	Decor	Breakables	Music	Extras
	2	**Legacy Codebase** `legacy`	Irregular stone slabs	Cobwebs in corners	Crates	A minor, 92 bpm, triangle	—
	3	**Forgotten Branches** `branches`	Moss, soil and grass	Roots drawn like a `git log --graph`	Bushes	G dorian, 98 bpm, triangle, bird calls	Ivy, fireflies, branchier maps, own enemy family and boss
	4	**Dependency Hell** `dephell`	Square tiles	Glowing cracks and embers	Packages, cartons	B phrygian, 128 bpm, sawtooth	—
	5	**Production** `production`	Checker plate with rivets	Hazard stripes at doors, cables	Packages, cartons	A harmonic minor, 138 bpm, square	Own enemy family
	6	**Sandbox Borders** `sandbox`	Rippled sand	Bleached bones, pebbles, dry grass	Sandcastles	D phrygian, 100 bpm, triangle	Cacti (solid, prick), border fences, sandstone, tumbleweeds, own enemy family
	7	**The Training Data** `training`	Graph paper	Scattered characters (`0 1 {} lol tl;dr nan`)	Cartons, crates	E major, 116 bpm, triangle	—
	8	**The Latent Space** `latent`	Dot grid	Stars and a constellation	Bushes, packages	C lydian, 96 bpm, sine	—
	9	**Undefined Behavior** `undefined`	Square tiles	Shifted colour stripes (glitches)	All four kinds	B♭ locrian, 144 bpm, square	—
	10	**/dev/null** `devnull`	Dot grid	Almost nothing: a few lost bits	Crates, packages	G minor, 80 bpm, triangle	—
	11	**The Context Limit** `context`	Square tiles	Fading fragments of earlier context	All four kinds	C♯ mixolydian, 108 bpm, square	Rate Limiters

The swatch is a tiny room in the theme's colours: wall, floor checkerboard, door (top) and accent (centre dot).

Colour coverage

Almost all floors are **dark**: the floors sit at low brightness so that sprites, pickups and enemy shots stand out. Sandbox Borders is the one mid-bright floor; its sand is muted on purpose so yellow and amber shots stay readable. By hue:

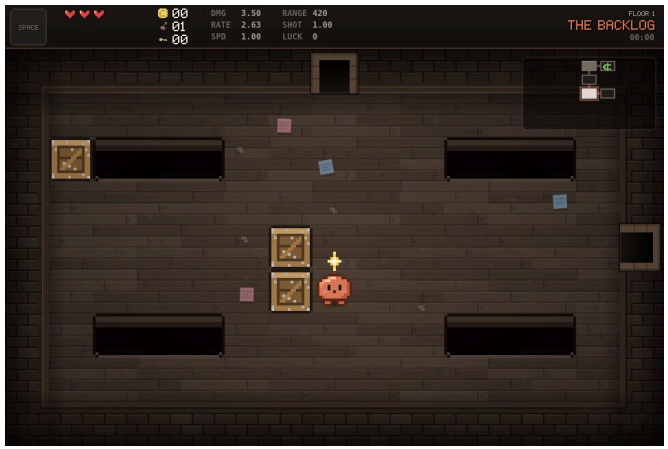

- **Browns / warm:** The Backlog (brown), Dependency Hell (rust with orange embers), Production (grey with red walls).
- **Sand / yellow:** Sandbox Borders (dusky sand, sun-yellow accent).
- **Greens:** Forgotten Branches (forest green), The Training Data (muted green).
- **Blues / violets:** Legacy Codebase (blue-grey), The Latent Space (indigo), The Context Limit (pale fog blue).
- **Other:** Undefined Behavior (magenta-purple), /dev/null (near black).

Gaps: nothing cyan or teal, and nothing truly bright (white, snow, light stone). Several enemies fire yellow or amber shots, so check contrast with screenshots before settling on a bright palette.

The floors

1. The Backlog

Where tickets go to die.

- **Look:** warm cardboard brown; horizontal wooden planks with staggered joints; forgotten sticky notes (yellow, pink, blue, green) and paper scraps on the floor. Accent: coral `#d97757` (the avatar's colour).
- **Breakables:** crates in 60 % of combat rooms, up to 3 per room.
- **Music:** D dorian, 104 bpm, square lead.
- **Gameplay, enemies:** gentle on purpose: only Bugs, Null Pointers and Memory Leaks (plus the occasional Hallucination).

2. Legacy Codebase

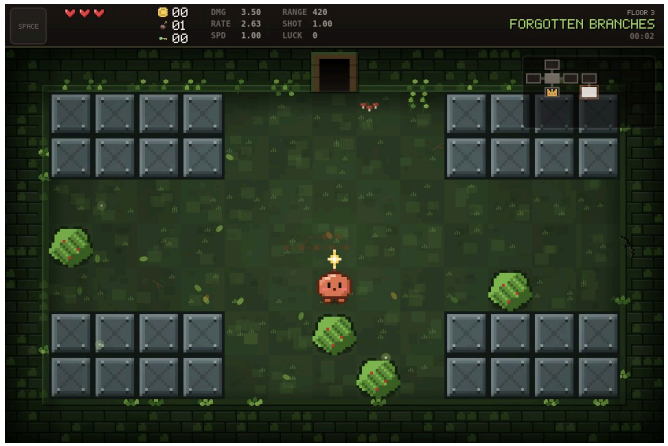

Written by someone who left in 2009.

- **Look:** dusty blue-grey; old, irregular stone slabs (1, 2 or 4 per tile); cobwebs in the inner corners. Accent: steel blue `#7fb0c9`.
- **Breakables:** crates in 65 % of combat rooms, up to 3 per room.
- **Music:** A minor, 92 bpm, triangle lead.
- **Gameplay, enemies:** the old-code crowd: Bugs, Null Pointers, Spaghetti Code, Jira Tickets, Zombie Processes and Deprecation Warnings (the last two arrive here a floor earlier than they used to). Its own enemy is the Stack Trace, a beige computer-case scorpion whose printer-paper tail stings along a telegraphed line.

3. Forgotten Branches

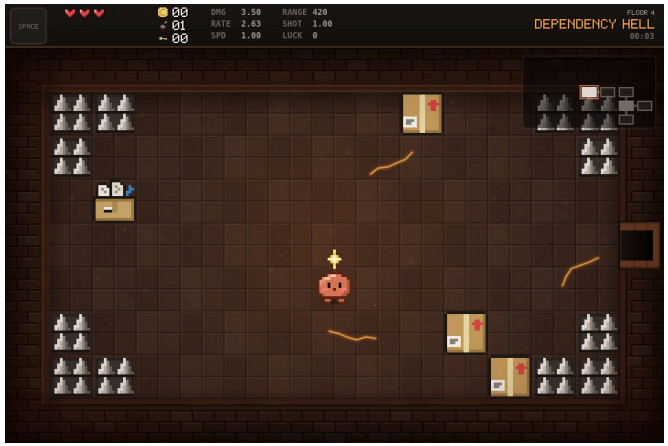

It is probably for the best that these never got merged.

- **Look:** forest floor of moss cushions, soil patches and grass blades instead of joints. Roots on the floor are a little `git log --graph`: a trunk with commit dots and one or two branches that split off and never merge back. Ivy hangs from the walls and fireflies drift through the room. Accent: leaf green `#a6d36b`.
- **Breakables:** bushes in 80 % of combat rooms, up to 4 per room.
- **Music:** G dorian, 98 bpm, triangle lead, with an occasional bird call (never during the boss fight).
- **Gameplay, maps:** branchier, with at least 7 dead ends per floor instead of 3 (`gen.minDeadEnds`).
- **Gameplay, enemies:** an own family found only here (until floor 8): Stale Branch, Detached HEAD, Cherry-Pick and the Orphan Commit (see the enemies list). They share a woody look, leaf effects and wood-knock sounds. Merge Conflicts are at home here too. Together they make up about three quarters of the enemies on floor 3.
- **Gameplay, boss:** the Octopus Merge, about 52 % on floor 3 and 41 % on floors 14, 25, … on a first visit.
- **Extra text:** room-clear quips ("Branch deleted", "Stale for 847 days", "Rebased onto nothing", …) and epitaphs ("Died on a branch nobody remembers.", …) mixed into the general lists.

4. Dependency Hell

node_modules now has its own gravitational field.

- **Look:** rusty dark brown; square tiles with bevelled edges; glowing cracks and ember dots. The strongest light of all floors (orange). Accent: amber `#f0a03c`.
- **Breakables:** packages and cartons in 70 % of combat rooms, up to 4 per room.
- **Music:** B phrygian, 128 bpm, sawtooth lead.
- **Gameplay, enemies:** things that multiply and won't stay dead: Memory Leaks, Scope Creep, Zombie Processes and Race Conditions. Its own family (cardboard bodies, cyan shots against the orange embers): the Honeypot, a jar whose funnel pulls you toward its jaws, and the Rolling Release, a bundle of packages that bounces faster with every bump until a "Breaking Change" bursts it open.

5. Production

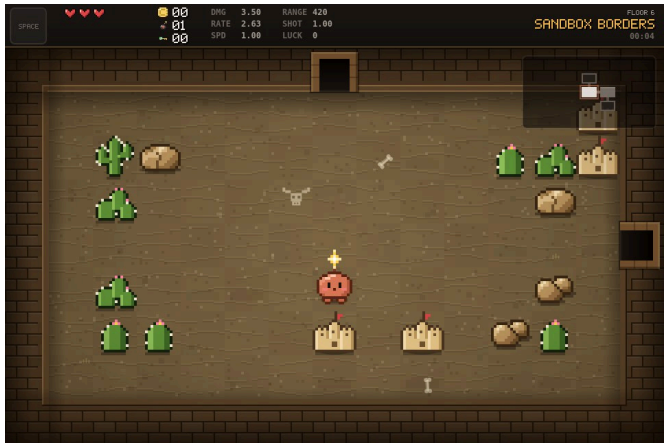

Don't touch anything. Especially on a Friday.

- **Look:** industrial grey checker plate with diagonal studs and riveted seams; dark red walls; yellow-black hazard stripes in front of the doors and cables across the floor. Accent: signal red `#e05a4f`.
- **Breakables:** packages and cartons in 70 % of combat rooms, up to 4 per room.
- **Music:** A harmonic minor, 138 bpm, square lead.
- **Gameplay, enemies:** everything that breaks at runtime: Race Conditions, Graphics Glitches, Flaky Tests, Jira Tickets, Merge Conflicts and Null Pointers. Its own family (since 2026-11-03): the Rate Limiter (fires three shots, then sits out a "429" pause; also on The Context Limit) and the Port Scanner (pops out of numbered floor ports in a fixed order). Steel bodies, cyan shots: red would vanish on this floor.

6. Sandbox Borders

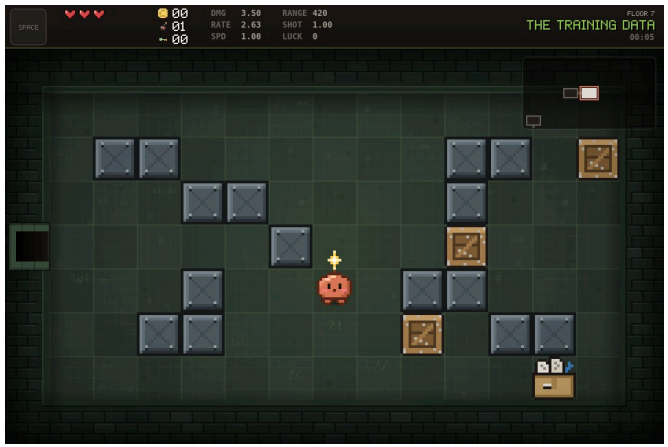

Nobody mentioned the cacti. Or the lack of water.

- **Look:** the edge of the sandbox: dusky, rippled sand (muted, so yellow and amber shots stay readable), sandstone walls, bleached bones in the sand (horned skulls, ribcages, single bones), pebbles and dry grass. Now and then a tumbleweed rolls across the room. Accent: sun yellow `#f2b84b`.
- **Obstacles:** rocks become sandstone boulders, and indestructible blocks become the border itself: chain-link fences with barbed wire where blocks line up, striped concrete barriers where they stand alone.
- **Gameplay, cacti:** half of the rocks in combat rooms are cacti instead. They are solid like rocks but prick you on contact (half a heart and a push back); bombs blow them up. Never right in front of a door.
- **Gameplay, enemies:** an own family found only here (until floor 8), the Spinlock (a coiled desert snake that lunges) and the Rootkit (burrows under the sand and pops up next to you). Deprecation Warnings live here too and are 2.5× as common, and Hallucinations twice as likely (mirages). Since 2026-11-03 the family also has the Dust Daemon (a whirlwind that bends your shots), and the Rolling Release from Dependency Hell tumbles through as a tumbleweed (at 0.6× its usual odds).
- **Breakables:** sandcastles in 75 % of combat rooms, up to 4 per room; when damaged, a tower collapses.
- **Music:** D phrygian, 100 bpm, triangle lead.
- **Extra text:** room-clear quips ("Permission denied", "Sandbox violation logged", "No water found", …) and epitaphs ("Escaped the sandbox. Not the cactus.", …).

7. The Training Data

It's mostly forum arguments.

- **Look:** muted green graph paper (fine lines every 16 px, stronger every 64 px); scattered characters from the "training data": `0`, `1`, `{`, `}`, `;`, `+1`, `lol`, `?!`, `tl;dr`, `nan`, … Accent: lime `#8bc34a`.
- **Breakables:** cartons and crates in 70 % of combat rooms, up to 4 per room.
- **Music:** E major, 116 bpm, triangle lead.
- **Gameplay, enemies:** what the model learned from: Rogue Agents (they debut here and are 1.5× as common), Spaghetti Code, Flaky Tests and Deprecation Warnings (outdated docs). Hallucinations are 1.5× as likely. Its own enemy is the Dry Run: a ghost rehearses every move, and the crash-test dummy repeats it exactly one second later.

8. The Latent Space

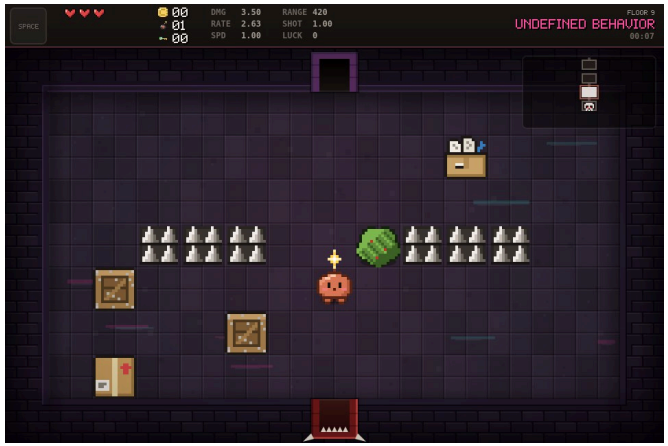

Here be embeddings.

- **Look:** deep indigo with a dot grid; stars (embeddings) and one constellation per room. Accent: lavender `#a78bfa`.
- **Breakables:** bushes and packages in 75 % of combat rooms, up to 4 per room.
- **Music:** C lydian, 96 bpm, sine lead.
- **Gameplay:** the first floor where everything mixes (see "Floor 8 and deeper" above), and the first side quest.

9. Undefined Behavior

Anything can happen. Mostly bad things.

- **Look:** dark purple tiles with shifted magenta and turquoise stripes, like rendering glitches. Accent: hot pink `#ff4fa3`.
- **Breakables:** all four kinds (crates, bushes, packages, cartons) in 80 % of combat rooms, up to 5 per room.
- **Music:** B♭ locrian, 144 bpm, square lead (the fastest loop).

10. /dev/null

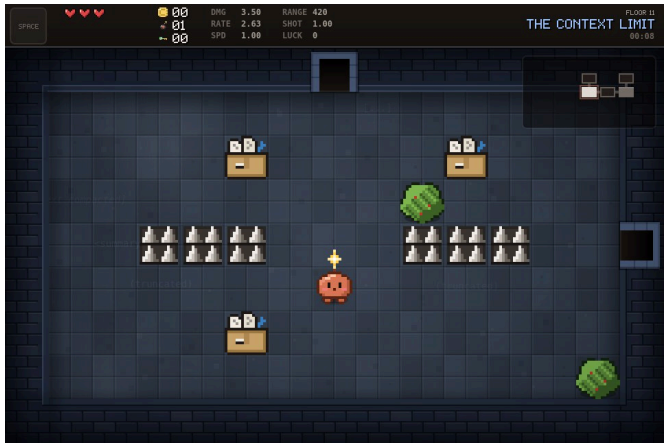

Everything you send here is gone. Including you.

- **Look:** almost black and monochrome; a faint dot grid and almost nothing else, just a few lost bits. Accent: pale grey `#d0d0d8`.
- **Breakables:** crates and packages in 75 % of combat rooms, up to 5 per room.
- **Music:** G minor, 80 bpm, triangle lead (the slowest loop).

11. The Context Limit

You've been here before. You don't remember.

- **Look:** pale fog blue tiles with soft fog patches; faint, half-faded fragments of earlier context on the floor ("[...]", " (truncated)", "as I said earlier", "[context compacted]", ...). Accent: light blue `#9ec5ff`.
- **Gameplay, enemies:** the Rate Limiter from Production also lives here (a floor about tokens and limits).
- **Breakables:** all four kinds in 80 % of combat rooms, up to 5 per room.
- **Music:** C♯ mixolydian, 108 bpm, square lead.

Adding a floor

The step-by-step recipe is in AGENTS.md (§5, "Add a floor"). In short: add an entry at the same position in `B.TEXT.FLOORS` and `B.FLOOR_THEMES`; new patterns, decor, wall decor or ambient layers need a case in `src/render/renderer.js`. Inserting a floor in the middle shifts every later floor down by one and changes the cycle length, so themed content (like Forgotten Branches) repeats on different floor numbers afterwards. Then run `node tools/export-floors.js` and add the new floor to this document.
